DETAILED ACTION

1. This Office action is in response to application No. 09/620,459, filed on 07/20/2000.
2. Claims 1-6 are presented for examination.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-6 are rejected under 35 U.S.C. 103 (a) as being unpatentable over Schieve et al. (U.S. Pat. No. 5,455,933) in view of Cheffetz et al. (U.S. Pat. No. 5,133,065).

As per claims 1, 4, 6, Schieve substantially discloses a method/system for remote diagnosis of personal computers (which is readable as Applicant's claimed invention wherein it is stated that a computer program pre-recorded on a removable storage medium, the removable storage device of a local computer), the system comprising the steps of:

a bootable remote data recovery operating program locally operable by a central processing unit of the local computer and independently of a normal operating system of the local computer (see., abstract, col 3, lines 1-15, lines 43-49, col 4, lines 60-67); communication program means for

establishing communication (see., abstract, col 3, lines 49-63, col 5, lines 1-21). Schieve fails to disclose a method for remotely recovery data from the computer.

However, Cheffetz discloses a computer network for backing up computer data and program files onto backup media for subsequent restoring in the event the files are inadvertently corrupted or destroyed (see., abstract, col 1, lines 7-14). Though it is common in the art that fault recovery system (or fail-safe system) is a system designed to continue operating without loss of or damage to programs and data, when part of the system breaks down or seriously malfunction. Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify the remote diagnosis of personal computer of Schieve et al by including a backup computer as taught by Cheffetz et al because such modification would provide the remote diagnosis of personal computer of Schieve et al with a backup media for subsequent restoring in the event files are corrupted, destroyed or deleted, the newest copies of such files may be restored from the incremental or baselines backups (see., col 1, lines 7-54).

As per claims 2, Schieve discloses the claimed limitation, wherein the bootable remote data recovery operating program comprises a data recovery diagnostic program (see., abstract).

As per claim 3, Schieve discloses the claimed limitation, wherein the bootable remote data recovery operating program comprises a data recovery application program (see., col 6, lines 57-63, abstract, please note that booting computer or application program).

Art Unit: 2161

As per claim 5, Schieve discloses the claimed limitation, wherein the step of establishing a communications link comprises establishing a communications link over one of the group consisting of a modem, a local area network, a wide area network and Internet (see., col 6, lines 21-37, please note that it is obvious to realize that the serial link that comprises a telephone line to a remote location can also be an Internet or a local are network).

CONCLUSION

5. Any inquiry concerning this communication from the examiner should be directed to Pierre Eddy Elisca at (703) 305-3987. The examiner can normally be reached on Tuesday to Friday from 6:30AM to 5:00PM.

If any attempt to reach the examiner by telephone is unsuccessful, the examiner's supervisor, James Trammell can be reached on (703) 305-9769.
